

“Empowering Women”

“Gal Oya Green Poultry Feed - A Tale of Scientific Innovation, Economic Prosperity, and Environmental Harmony in Aluth Oya, Polonnaruwa”

Gal Oya Green Animal Feed Processing Center, located in Aluth Oya, Polonnaruwa district, in the dry zone of Sri Lanka, serves as a symbol of resilience and the ability to overcome challenges. In the region where the project was initiated, one of the primary challenges that the poultry farmers faced was sourcing quality feed for their chicks. This significant issue led a group of enterprising women to take the initiative and establish a local feed processing unit with the support of the Japanese Supplementary Budget (JSB) project. The intention behind this endeavor was to bridge the gap in the market by providing high-quality poultry feed and, at the same time, empowering local women. Additionally, the project aimed to promote sustainable practices in poultry farming, thereby contributing to the overall well-being of the community.

The production team collaborated with nutritionists and local farmers to create a sustainable and impactful poultry farming approach in Aluth Oya, Polonnaruwa. They formulated a scientifically sound diet using locally sourced grains, herbs, and supplements and implemented eco-friendly practices in feed processing. This initiative has resulted in improved poultry health and egg production, created job opportunities for local women, and demonstrated a commitment to environmental sustainability.

This center is equipped with state-of-the-art technology and processes that enable the efficient and safe handling of animal feed. It's a crucial component of the project that aims to improve the quality and distribution of animal feed. The center is equipped with advanced machinery and has a highly skilled team that ensures that the entire process is carried out seamlessly.

The support from JSB has been instrumental in transforming our poultry processing unit in Aluth Oya, Polonnaruwa. The building renovation has provided a modern and efficient space for our

operations. The acquisition of essential machinery, including grinding, mixing, and pelleting machines, along with a bag-closer machine and digital scale, has significantly enhanced production capabilities. The JSB project's generous provision of 1000 kg of high-quality ingredients and printed bags ensures that our poultry feed maintains the highest standards. The first lot of medicine packages and equipment, such as Federer, water buckets, cabinets, tables, chairs, egg collecting trays, and storage facilities, have been crucial in streamlining our processes. The inclusion of candling machines, record-keeping books, and a rainwater harvesting tank showcases a commitment to both quality and sustainability. Moreover, JSB's contribution of a first aid box and essential infrastructure facilities demonstrates a holistic approach to supporting our poultry venture. With JSB's assistance, we are not only producing high-quality poultry feed but also establishing a well-equipped and sustainable poultry processing unit in Aluth Oya.

The following passage describes how a women's team has been able to significantly improve the economic situation of a group of individuals who previously struggled to earn a decent income. These individuals used to make a meager monthly income of only 2,000 LKR, but thanks to the team's efforts, they now earn a much higher monthly salary of nearly 12,000 LKR. Additionally, by selling various animal husbandry products, they have been able to diversify their income streams and increase their overall earnings. To further expand their business, the team is planning to produce cow starter rations. Currently, the business earns an impressive amount of 507,000.00 LKR by selling poultry feed. They sell 2600 kg of feed, and despite the cost of production, which is 180 LKR, they can make a profit of 20 LKR per kg. Overall, the business seems to be doing well and has been able to maintain a decent profit margin.

In this inspiring story, a group of women came together to set up a poultry feed processing unit that prioritized local roots and scientific principles. By doing so, they not only fulfilled the need for high-quality feed but also brought about economic empowerment for the community, all while being mindful of environmental sustainability. The remarkable success of Gal Oya Green Poultry Feed serves as a shining example of how the combined forces of science, entrepreneurship, and community development can create a lasting impact. This incredible initiative has the potential to inspire similar ventures in different regions, paving the way for a brighter future for both people and the planet.
